Chaitanya Sai Chandu Yendru

Atlanta, GA • yendruc@gmail.com • (716) 986-2081 • LinkedIn • Portfolio • Github

PROFILE

Dynamic AI software developer with 5+ years of experience and a master's in computer science. Passionate about leveraging GenAI and uptrend technological stack to optimize financial processes, health service related applications, manage risk, and drive impactful projects.

TECHNICAL SKILLS

- **Frameworks, Libraries and Platforms:** Spring Framework (Spring Boot, Spring MVC, Spring Data, Spring Security), Hibernate, Microservices Architecture, Apache Kafka Streams,.NET Framework, Flutter, ReactJS.
- **Programming Languages**: Java, Kotlin, C#, TypeScript, Python, Shell scripting.
- **Cloud Services and Machine learning**: AWS Services, GCP, OCI, AI Solution design, Deep learning.
- **RDBMS and NoSQL** : SQL Server, MySQL, PostgreSQL, MongoDB, Cassandra, Redis.
- **Messaging Frameworks** : Kafka, RabbitMQ, JMS (Java Message Service).
- **Data Engineering :** PySpark, Apache Spark, Hadoop, HDFS.
- **Other Tools**: Maven, Gradle, JUnit, Mockito, IntelliJ IDEA, Jenkins, GitHub Actions, SonarQube, Prometheus, Grafana.

PROFESSIONAL EXPERIENCE

ATLANTICUS **Atlanta, GA**

ACH - Software Developer **2025 Feb–Present**

Developing spring apps, flow tasks and schedules for various payment processing components. Improving performance of ACH delegates.

- **Redesigning 10+ SSIS control flow tasks** using AWS serverless computing, enhancing scalability and efficiency while integrating with various payment modes.
- Developed NACHA file generator and optimized the process **streamlining the process by 47%** and **eliminated the necessity for enterprise costs of licensing Treasury Software**.
- Redesigning various microservices like customer communication, payment returns and account center for performance increment resulting in **~28% code reduction** and **~19% reduction average latency** in gateway term calls.
- Prompt engineered the applications for **migrating the services from JDK11 to JDK17 and then JDK21** – includes **architectural changes**, dependency resolution, Qadana report handling and refactoring.
- Developed **AI Agentic bot** to classification of correspondence files into categories – utilized **FAISS index, similarity indices, LLM integration** and **langchain** to achieve automatic segregation of **1.2 Million files/yr with 94% accuracy and a feedback loop for continuous learning**.
- Worked on rules engine wrapper and development of in-house UI, UX for rules implementation and updating for business analysts and product owners. Developed as a reactive Java application and a frontend application with ReactJs. Implementation established for Drools rules engine processing **0.8 Million rules/week**.

REDPRINT **Buffalo, NY**

Senior Software Developer [Internship] **2024 June–2024 August**

Developed a Payment CRM, migrated Firebase data, and integrated systems to improve performance and **reduce costs by 11%**.

- Resolved dual write issues between Firebase and MySQL, **reducing the read-write cycle by 13%**, and redeveloped the gym equipment usage dashboard, **decreasing server usage by 8%**. Integrated Stripe payment **reducing capital costs by 28%**.
- Created migrations project for the database transfer, **improvising the fetch and update process by 36%**.
- **Led a team of 3** to develop a gateway and API to interact with various client applications involving RedprintFit client suite.

DEPARTMENT OF ENGINEERING EDUCATION, UNIVERSITY AT BUFFALO **Buffalo, NY**

Product Manager and Senior Developer **2024 May–2024 August**

Led a team of 4 for development of a mobile time-tracking app with React Native, Apache server, MariaDB, and PHP REST API.

- Reduced project setup time by 20% with React Native and **improved database performance by 35%** with MariaDB-Apache integration and indexing. Enhanced API response time by 40%.

DELTAX **Banagalore, India**

Software Product Engineer **2020 Jan-2023 July**

As a Product Engineer at DeltaX, I specialized in the .NET ecosystem with expertise in frontend technologies like VueJs, ReactJS and API development.

- **Boosted data retrieval by 24%** using .NET Core and Framework, and built microservices for **data summaries with a 2.3% error rate**, scaled using Docker.
- **Optimized 32 RESTful API endpoints** with performance analyzer, improving **data integration by 30%**, and designed a **campaign comparison tool with 137 metrics**, applying advanced algorithms to optimize funding strategies for campaigns, enhancing insights with Grafana and Prometheus.
- Enhanced ad-hoc query development for **report generation in 37 categories across multiple ad server engines** involving Google Ads, Facebook Ads, etc.,

- **Developed parent-child architecture for Google Ads API integration** for campaign, ads and AdGroup integration. **Created 49 metrics evaluation patterns** for decisive actions in task executions.

PROJECTS

- **TrackThemOut - Advanced System Monitor** [Repository]
  Advanced Windows system monitor tracking 8+ metrics including CPU, memory, battery health, disk performance, network usage, GPU stats, and temperature sensors. Features real-time charts, customizable alerts, and data logging with 100-point history retention.
- **RazorVine– Advanced customer analytics with causal inference and ML optimization.** [Repository]
  Cutting-edge platform combining causal inference, deep learning, and real-time optimization for customer targeting. Features 4+ ML algorithms, 3 causal methodologies, multi-armed bandits, and FastAPI-powered analytics serving 10,000+ simulated customers, improving treatment prediction accuracy by 17% .
- **ShopYourWish – Microservices** [Repository]
  Designed ShopYourWish, a cutting-edge microservices project built on Spring Boot, leveraging an event-driven architecture, Spring Cloud Gateway for API Gateway, CQRS for scalable operations, and Docker for containerization.
- **ShockDart – Notification hub with Kafka, Firebase, and multi-channel support** [Repository]
  ShockDart is a scalable notification service built with Go, featuring Kafka message queuing, Firebase integration, and PostgreSQL persistence. Supports 3+ notification channels with OAuth authentication and Docker deployment.

PRODUCTS

- **SageOrb - Financial Analytics & Liquidity Optimization Platform [Demo]**
  SageOrb is a comprehensive financial analytics platform featuring 4 projection methods, 3 optimization strategies, ML-powered insights, and real-time dashboards. Built with React frontend, Flask backend, PostgreSQL database, and Docker deployment for seamless financial decision-making.
- **AgentBreach - Advanced Agentic AI Finance Platform [Demo]**
  Six AI agents handle financial analysis, payment processing, fraud detection, portfolio management, risk assessment, and compliance with 25+ dependencies, 3 payment providers, real-time market data, and automated trading capabilities.
- **ScannerAI - Intelligent document scanning and processing system with categorization [Demo]**
  Uses AWS Lambda functions with Bedrock AI for OCR and text extraction**, processing 10,000+ documents/hour with 99.5% accuracy across 3 environments**. The system provides automated **OCR processing with support for 15+ document formats** and batch processing of up to 1,000 documents simultaneously, with integration to **AWS Bedrock for intelligent text extraction** achieving 95%+ accuracy. Built on a scalable serverless architecture with S3 storage, auto-scaling from 0 to 10,000 concurrent executions, and **sub-second response times**.
- **FinCache – High-performance Redis-compatible cache for financial applications with sub-millisecond latency [Demo]**
  Ultra-fast in-memory cache handling 100k+ ops/sec with sub-millisecond latency. Supports dual protocols (Redis + HTTP), real-time monitoring, and financial-specific features like fraud detection and market data caching. Built in Go with Docker deployment.

EDUCATION

UNIVERSITY AT BUFFALO — **Buffalo, NY**
Master of Science in Computer Science and Engineering — **2023-2024**
- CGPA: 3.97; Coursework : Concurrent computing; Advanced Algorithms; Data computing and Operating Systems.

INTERNATIONAL INSTITUTE OF INFORMATION TECHNOLOGY — **Raipur, India**
Bachelor of Technology, Major in Electronics and Communication Engineering — **2016-2020**
- CGPA:3.65; Coursework: Probability and Statistics, Application of Machine learning methodologies, VLSI System design, Financial Systems, Advanced Algorithms.

ADDITIONAL INFORMATION

- Pioneered NGO Mukti's substance abuse prevention modules; reached 5,000+ individuals, boosting awareness by 40% in six months.
- Mentored 2 interns Sonu. K and Afif Ahmed.S during professional work as a product engineer
- AWS Certified Solution architect.
- Co-authored publications - **Joint Sparse Channel and Clipping Level Estimation in OFDM-based IoT Networks: A Bayesian Learning Approach** and Multimodal Conversatioal Emotion Analysis with Robustness to Incomplete Modality Details(ICME 2025)
